Annual Index 1988

Order of Contents

Using the Index

Subject Index

Author Index

Journal Index

Readers are reminded that the index uses natural language and for effective use some exploration of synonyms and alternative English/American spelling may be required.

Using the Index

This index has been designed to allow rapid search without any need to refer to a long classification code. It will be seen to have some similarities with the common KWIC (Keyword in context) type of computer index, although it departs from the KWIC layout by placing the indexed word in the conventional left hand position. By means of words chosen from the title or the body of the abstract, each item is indexed an average of 7 times. As all of these words have been selected by the editors or other specialists, and are not automatically chosen by machine, the number of redundant entries is kept to a minimum. However, the index does employ the spelling and terminology of the original abstracts and their titles, so that for best results when searching the index it is important to anticipate alternative (English/US) spelling and the existence of many approximate synonyms.

The SUBJECT INDEX contains three types of entry which are printed in various rearrangements to give an average of seven entries per abstract.

1) Foreign titles. They are here indexed only by the first significant word, and the entire title is printed, even where this occupies two or more lines. All the lines after the first are inset, and the number of the abstract ONLY appears on the last line. e.g.

```
MIGRATIONS DE TRAVAIL DANS LES BOULEVERSEMENTS DE LA SOCIETE EGYPTIENN
                    E.=LES                                          86V/3317
```

2) English titles. These are either the original title of an article in English, or the translation of the foreign title. Titles may be recognised by the fact that they end with a full stop (period) and an equals sign. e.g.

```
ISLAMIC POPULATIONS: LIMITED DEMOGRAPHIC TRANSITION.=               86V/1390
```

or alternatively:

```
DEMOGRAPHIC TRANSITION.= ISLAMIC POPULATIONS: LIMITED               86V/1390
```

3) Groups of keywords. (usually 2-8 in number) A keyword is a single word or group of words taken from the text of the abstract to supplement the title. In cases where the title is fully informative no keywords are added. Where there are two or more words forming a composite keyword they are hyphenated, and each keyword is separated from the next by a space. The end of a group of keywords is marked by an equals sign alone. e.g.

```
AGRICULTURAL-PRODUCTION DEPENDENCY TROPICAL-AFRICA POLITICO-ECONOMICS=  86V/0685
```

or alternatively:

```
DEPENDENCY TROPICAL-AFRICA POLITICO-ECONOMICS= AGRICULTURAL-PRODUCTION  86V/0685
TROPICAL-AFRICA POLITICO-ECONOMICS= AGRICULTURAL-PRODUCTION DEPENDENCY  86V/0685
POLITICO-ECONOMICS= AGRICULTURAL-PRODUCTION DEPENDENCY TROPICAL-AFRICA  86V/0685
```

The title entries are indexed under every significant word in the title. Each significant word will be found in its appropriate alphabetical position and is followed by as much of the title as can be printed on one line. In very many cases the whole title will fit on one line. e.g.

```
POLICY CHOICES IN SOUTH ASIAN TOURISM DEVELOPMENT.=                    86V/3604
SOUTH ASIAN TOURISM DEVELOPMENT.= POLICY CHOICES IN                    86V/3604
TOURISM DEVELOPMENT.= POLICY CHOICES IN SOUTH ASIAN                    86V/3604
```

Where the title is too long the line is filled with what will fit in:

```
PROTEIN INTAKE REGIONS IN THE BACKWARD DROUGHT/FLOOD PRONE AREA OF MEW  86V/0376
DROUGHT/FLOOD PRONE AREA OF MEWAT - A CASE STUDY OF NUH TEHSIL, HARYAN  86V/0376
MEWAT - A CASE STUDY OF NUH TEHSIL, HARYANA, INDIA.= PROTEIN INTAKE RE  86V/0376
NUH TEHSIL, HARYANA, INDIA.= PROTEIN INTAKE REGIONS IN THE BACKWARD DR  86V/0376
HARYANA, INDIA.= PROTEIN INTAKE REGIONS IN THE BACKWARD DROUGHT/FLOOD   86V/0376
```

The keywords are reordered in the same way, and every keyword will be indexed and followed by the other keywords for the abstract within the room available on one line. The context of adjacent keywords will narrow the search to relevant articles, e.g. by identifying the relevant geographical area. In this connection it should be noted that virtually all the geographical names in the countries (e.g. states in the USA, counties in England) have been indexed. Northern and Southern and similar adjectives have been indexed where they are part of a proper name, e.g. North Dakota but not north Bangaladesh. Considerable care has been exercised in indexing common elements such as economic relations, planning, development and so on, but these terms are indexed where they are a critical element in the title of the abstract.

Where the first 20 letters (including spaces) of an entry are the same as those of the line above, they are omitted from the index, allowing the eye to move to the remainder of the line. For example:

```
URBAN INFORMAL SECTOR: AN AGENDA FOR RESEARCH.= THE                    86V/1795
                     R: AN OVERVIEW.= THE ROLE OF THE                  86V/1796
                     R IN PORT HARCOURT AND CALABAR ( NIGERIA).=DEVELOP 86V/3106
                     R - SOME CRITICAL ISSUES ( INDIA).= WOMEN'S EMPLOY 86V/3823
```

The AUTHOR INDEX needs little further comment. It is a simple alphabetical listing of all the authors with some additional information to speed search for particular articles. Thus the author's name is followed by the date of publication and the first 30 characters of the title. This is printed in the original language but in some cases only the English translation of the title is given - notably with Russian, Chinese and Japanese articles.

Articles written by more than one author have the other authors listed as far as space allows, and then the later authors are listed separately followed by (2), (3) etc., signifying their place in the sequence. In a few cases the original abstract does not list all these authors and for these the first author only is listed, followed by 'and others'. Cross references are generally given for authors with prefixes, e.g. Van Andel will be found under both V and A.

The JOURNAL INDEX cites all periodicals cited in International Development Abstracts.
